Professional Summary

- Applications support analyst with two years of enterprise application and production support experience in SLA-driven, ticket-based environments, owning the incident lifecycle from triage and short-term resolution through root cause isolation and long-term remediation with technology partners, acting as the liaison between business users and engineering, and maintaining runbooks and technical support documentation.
- Analytical and detail-oriented, with a record of 85% first-contact resolution, 90% customer satisfaction, and a 20% reduction in average incident resolution time, combining SQL querying, log and trace analysis, and dashboard monitoring with clear, diplomatic written and verbal communication across business and technology stakeholders.

Skills

Applications Support:	Incident Management, Incident Triage, Problem Management, Root Cause Analysis, Escalation Management, SLA Management, Change and Release Support, Post Release Validation, Runbook and Technical Support Documentation
Monitoring & Analysis:	DataDog, Grafana, Dashboard Monitoring, Log and Trace Analysis, Health Checks and Alerting, Trend Analysis, Error Rate and Latency Investigation
Ticketing & ITSM:	JIRA, Salesforce CRM, Intercom, Confluence, Forge, Issue Tracking and Reporting
Databases & Querying:	SQL, Oracle, PostgreSQL, MySQL, MongoDB, Hex, Data Reconciliation and Impact Analysis
Systems & Scripting:	Linux, Python, PowerShell, Bash, REST APIs, Git, Docker
Financial Systems:	Stripe, Metronome, Anrok, Transaction Analysis, Billing and Metered Usage Reconciliation

Experience

Technical Support Specialist | Boldr (Toronto, ON) Aug 2026 - Present

- Own the end-to-end incident lifecycle for users of Claude and the Anthropic Console, triaging API integration, authentication, rate limit, and workspace configuration issues through Intercom while consistently meeting SLA commitments.
- Act as the liaison between business users and engineering, investigating platform errors and latency patterns in DataDog and correlating API error rates with request traces to isolate root cause, then escalating with reproducible test cases and detailed debugging documentation that helps engineering prioritize bug fixes.
- Query account and usage data in Hex using SQL to validate reported issues, quantify business impact, and surface recurring failure patterns for proactive remediation.
- Resolve billing and usage discrepancies across Stripe, Metronome, and Anrok, reconciling metered consumption against invoices and tax records and communicating findings clearly to finance and business stakeholders.
- Perform account and organization level configuration in Forge, including workspace, access, and limit adjustments, maintaining audit-ready records and contributing runbooks that standardize handling of repeat issues and reduce escalations.

Enterprise AI Technical Support Specialist | Accenture (St. Catharines, ON) Aug 2025 - July 2026

- Served as a primary support contact for the OpenAI enterprise generative AI platform, triaging, troubleshooting, and resolving 100+ monthly incidents raised by business users across production, development, and business teams.
- Progressed from stabilizing multiple support queues in a Tier 2 capacity to supporting premium enterprise accounts, operating with limited direct supervision and exercising independent judgment on issue prioritization and escalation.
- Logged, managed, and followed up on support tickets through Salesforce CRM, ensuring issues were documented, prioritized, tracked, and resolved within SLA.
- Reduced average incident resolution time by 20% by replicating reported issues, analyzing DataDog and Grafana logs, and escalating to Tier 3 with clear, detailed debugging documentation.
- Monitored platform dashboards in DataDog and Grafana, identifying recurring failure patterns and flagging trends that drove process improvement and platform stability initiatives.
- Investigated billing and payment processing issues in Stripe, performing transaction analysis and maintaining clear communication with stakeholders throughout resolution.

Projects

Banking Transaction Processing Platform Live Demo | GitHub

Technologies: Python, FastAPI, Kafka, Spark Structured Streaming, WebSocket, PostgreSQL, Docker

- Built an end-to-end banking transaction pipeline with real-time fraud detection, batch analytics, and automated reporting, applying production support practices in monitoring, troubleshooting, and ongoing maintenance.

- Implemented automated health checks and alerting across the Kafka and Spark integration layers to support pipeline reliability, and authored operational runbooks and root cause analysis procedures for incident handling.
- Modelled transaction, account, and fraud alert data in PostgreSQL and wrote the SQL used to reconcile balances and investigate flagged transactions.

Movie Recommendation System

Live Demo | [GitHub](#)

Technologies: Python, Hadoop, MapReduce, TF-IDF

- Designed and deployed a multi-stage Hadoop MapReduce recommendation system over the MovieLens dataset (100K ratings, 9,125 movies, 671 users), implementing content based, collaborative, and hybrid algorithms.
- Chose multiplication based signal fusion as a conjunctive precision strategy so the three algorithms produce structurally distinct recommendations, and shipped the result as a live, browsable demo.

AI QA Agent

Live Demo | [GitHub](#)

Technologies: Python, Robot Framework, pytest, Jenkins, n8n, Docker, PostgreSQL, Kafka, FastAPI

- Built an automated regression and QA agent that runs Robot Framework and pytest suites in a Jenkins CI pipeline and posts failure summaries to Slack, supporting release testing and post release verification.
- Orchestrated the workflow through a 12-node n8n pipeline running in Docker, using the Claude API in tool use mode to triage failures and produce structured defect summaries for developers.

Education and Certification

University of Windsor, Master of Applied Computing

May 2022 – Aug 2023

Parul University, Bachelor of Technology (in Computer Science & Engineering)

Jun 2017 – May 2021
